Luxury Wood Stile & Rail Doors

Since 1965, Woodland has 'set the bar' for producing the highest quality moulding and stair part millwork that you can always count on. Now we have brought these exacting standards to our solid wood stile and rail doors.

At Woodland, we only use the highest quality lumber and materials in production, so you know you are getting the absolute best and 100% Canadian made!

Our luxury wood doors are made to order based on your specific needs and requirements. Woodland can bring your vision to life so that your door is uniquely yours.

Have you ever had challenges with warping doors, or veneers that are too thin to stain?

Woodland Supply introduces **Stabila-Core** – our engineered core technology that provides unsurpassed resistance to extreme climates, warping, twisting, shrinkage, and expansion. All factors that plague solid wood doors throughout their lifetime. Woodland doors are made with the highest grade, 5/16" thick, solid hardwood faces, making them the ideal choice for high traffic and commercial applications where particle core doors with thin veneers just aren't designed to stand up.

Woodland doors are made with top grade 5/16" solid hardwood faces enveloping our solid wood engineered **Stabila-Core**.

Stabila-Core can be produced to match the same wood species as the hardward face or in poplar as a more cost sensitive alternative.

Woodland doors are available in all shapes and standard sizes, with custom capabilities up to 12' tall, 50" wide, and 2-1/4" thick. Panel thickness can range from 3/8" to 1-1/2" depending on the thickness and style of the door.

Woodland luxury stile and rail doors have appeal that is more than skin deep, they add value to your home for generations to come.

KMPI

Knife Marks Per Inch

What makes Woodland the leader in quality?

Our luxury millwork is crafted to reach the highest level of quality possible while adding value to your process. Installers and homeowners alike can see, feel, and benefit from our attention to detail.

At Woodland, we control the quality of the lumber we use, from the forest to your home. Our hands on grading process begins with our Ripping Department, where the focus is on matching wood colour and grain pattern so that product consistency is top of class.

Value is added again in our Milling Department, where we position the material to ensure the highest yield possible, both during production and during on site installation. No detail is overlooked!

We only use the highest quality FAS wood material available in North America, combine this with our extreme attention to detail and you have the millwork of choice for premier home builders, designers, contractors, and homeowners alike.

Have you heard of KMPI?

KMPI is an acronym for Knife Marks Per Inch. It is one of the leading indicators for quality standards in manufacturing of wood millwork. The higher the KMPI, the higher the quality, as it indicates the product was machined slower with more attention to detail.

This results in a smoother finish, that requires less sanding and finishing preparation, leaving you with a superior product that saves you time and money!

KMPI CHART	KMPI (knife marks per inch)
Woodland	18-26+
Competitors	12-18

When you see and experience a home finished with Woodland Supply mouldings, stair parts, and doors… YOU KNOW!
