# Woodland Box Beams

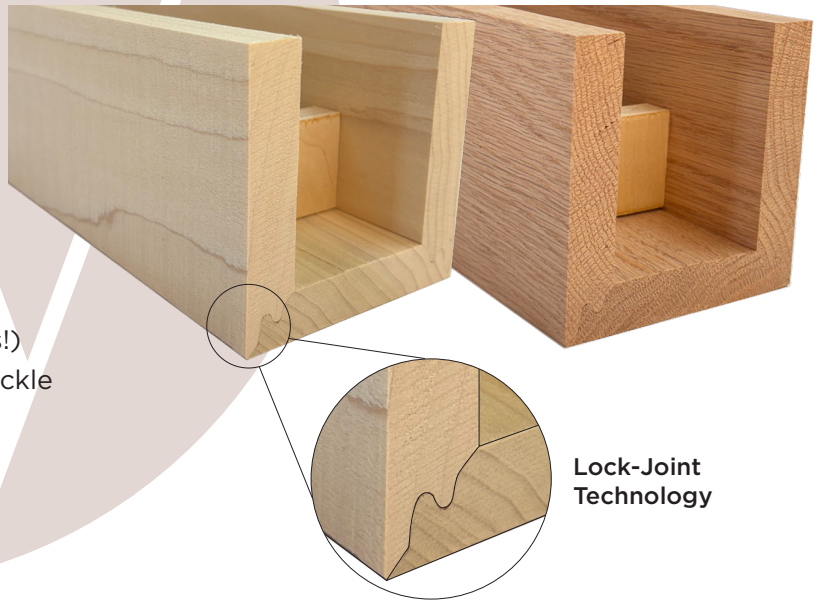

Our Woodland Box Beams offer a stunning solution that combines the beauty of traditional wood with the convenience of modern innovation. They feature a real wood exterior with a hollow center, making them more cost-effective and easier to install than solid wood while keeping their authentic wood aesthetic. The real wood exterior is available in both smooth and rough surface textures, and the hollow core can hide electrical wires or plumbing and clad existing structures.

## Options:

- Available in 4” to 12” beam sizes up to 16’ long
- Rough sawn or smooth face textures
- Assembled in 2, 3, and 4 sided configuration options or available as individual pieces to assemble on-site
- Available in a variety of wood species options (shown below). Our most popular species for beams are white oak, red oak, knotty alder, and poplar

**Rough Sawn Face Texture** **Smooth Face Texture**

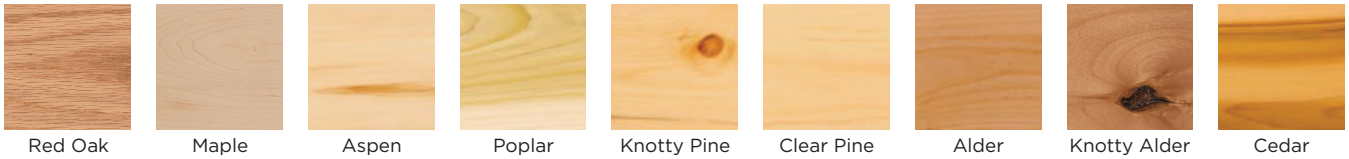

**Lock-Joint Technology**

## Features & Advantages:

- Lock-joint technology that creates a seamless mitered corner
- Multi-piece construction provides strength and stability against warping and twisting
- Lightweight (70% less wood than solid beams!)
- Easy installation process that most DIY can tackle
