WOODLAND
MANUFACTURING

KMPI

Knife Marks Per Inch

What makes Woodland Manufacturing the leader in quality?

Our luxury millwork is crafted to reach the highest level of quality possible while adding value to your process. Installers and homeowners alike can see, feel, and benefit from our attention to detail.

At Woodland, we control the quality of the lumber we use, from the forest to your home. Our hands-on grading process begins with our Ripping Department, where the focus is on matching wood colour and grain pattern so that product consistency is top of class.

Value is added again in our Milling Department, where we position the material to ensure the highest yield possible, both during production and during on-site installation. No detail is overlooked!

We only use the highest quality FAS wood material available in North America. Combine this with our extreme attention to detail, and you have the millwork of choice for premier home builders, designers, contractors, and homeowners alike.

Have you heard of KMPI?

KMPI is an acronym for Knife Marks Per Inch. It is one of the leading indicators for quality standards in manufacturing of wood millwork. The higher the KMPI, the higher the quality, as it indicates the product was machined slower with more attention to detail.

This results in a smooth finish, that requires less sanding and finishing preparation, leaving you with a superior product that saves you time and money!

KMPI CHART	KMPI (knife marks per inch)
Woodland	18-26+
Competitors	12-18
